

Riyas M

Senior Mobile Application Developer | Android | Flutter | React Native | Unity

Mobile: +44 7587 410 289 | Email: riyaskokkur@gmail.com | <https://mriyas.github.io>

Location: London | Availability: Immediate

PROFILE

Senior Mobile Engineer with over 10 years of experience building high-quality Android applications using Kotlin and Java, specializing in platform-level SDK development, scalable architectures, and reactive programming with RxJava. I have deep expertise in asynchronous programming, multithreading, background services, and location tracking, with hands-on experience working with BLE/Bluetooth and device sensors to enable real-time data collection at scale. My work spans fintech, smart home, gaming, and consumer products with a consistent focus on performance, reliability, and clean APIs that other development teams depend on.

I enjoy taking ownership of mobile platforms from early architecture decisions through to global-scale releases. I collaborate closely with backend, product, and infrastructure teams to deliver integrated, data-driven solutions, and have experience working directly with partners to integrate mobile SDKs into large-scale consumer applications. I bring strong communication skills, a product mindset, and a commitment to well-tested, maintainable code.

CORE TECHNOLOGIES

Android Development:

Kotlin, Java, Android SDK, **Jetpack Compose**, Material Design 3, Android Architecture Components (ViewModel, LiveData, Navigation), Coroutines, Flow, Dependency Injection (**Hilt / Dagger**), Gradle build system, modular Android applications, BLE/Bluetooth.

Android Architecture & Engineering:

MVVM/MVI, Clean Architecture, modular architecture, scalable mobile architecture design, SOLID principles, repository pattern, use-case driven architecture, reactive programming, lifecycle-aware components

UI Development & User Experience:

Jetpack Compose UI development, custom views, responsive UI design, adaptive layouts, animations, accessibility best practices, performance-optimized UI rendering

Networking & Data Layer:

RESTful API integration, Retrofit, OkHttp, GraphQL, JSON parsing, WebSockets, repository pattern, offline-first data strategies

Flutter Development:

Dart, Flutter SDK, Material 3 & Cupertino Widgets, Responsive UI & Adaptive Design, State Management (Bloc / Cubit, Riverpod, Provider), Clean Architecture (Domain–Data–Presentation layers), MVVM in Flutter, Dependency Injection (GetIt, Injectable), REST API Integration (Dio, Retrofit), Asynchronous Programming (Futures, Streams), Reactive Programming, Modularisation & Feature-based Architecture, Code Generation (Freezed, Json Serializable), Unit / Widget / Integration Testing, Performance Optimisation, Platform Channels (Native Android/iOS Interop)

Data Storage & Persistence:

Room Database, SQLite (sqlite), Hive, Moor/Drift, SharedPreferences, Flutter Secure Storage, local caching, in-memory caching, disk caching, offline-first architecture, data synchronization, repository pattern, clean architecture

Testing & Code Quality:

JUnit, Espresso, UI testing, unit testing, test-driven development (TDD), code reviews, static code analysis, maintainable test architectures

Performance & Optimization:

Memory optimization, multithreading, coroutine-based concurrency, performance profiling, ANR reduction, crash debugging and monitoring

DevOps & Delivery

Git, CI/CD pipelines, Jenkins, Atlassian Bamboo, GitHub Actions, automated builds, Play Store deployment, release management, feature flagging

Cross-Platform Development:

Flutter (Dart), React Native (JavaScript/TypeScript), platform integrations and shared architecture strategies

Game & Interactive Applications

Unity Engine, C#, 2D mobile game development, gameplay mechanics, animation systems, performance optimization

EMPLOYMENT

Senior Mobile Application Developer-Android

Dyson Ltd

August 2022 – till date

- **Developed and Shipped Advanced Features:** Added features to the MyDyson app using Kotlin, Jetpack (Including Jetpack Compose), and modern Android principles like MVVM, Coroutines, and Dagger/Hilt.
- **Migrated Home Screen to Modern UI:** Refactored the app's home screen using Jetpack Compose and Material 3 design system and updated 80% of UI tests for cross-compatibility with both XML and Compose-based views.
- **Enhanced Connectivity and User Satisfaction:** Boosted user satisfaction to 95% by resolving connectivity issues, optimizing BLE connections, and adding a backoff retransmission mechanism for Dyson connected products.
- **Innovative Testing Solutions:** Developed a Paparazzi snapshot wrapper for exhaustive testing of Jetpack Compose UI elements, covering all states. This cut

development time and achieved 100% test coverage.

- **Codebase Modernization:** Reduced Java source base to 2% in a multi-module project by re-writing Java code to Kotlin, adhering to best practices and improving maintainability.
- **CI/CD and Security Practices:** Experienced with CI/CD pipelines for mobile applications and knowledgeable in security best practices.
- **High-Quality Code Practices:** Authored reusable, self-documenting, high-performing code and participated in code reviews and pair programming to ensure 100% code quality and maintainability.
- **Agile Methodology and Stakeholder Engagement:** Experienced in Agile environments, presented sprint demos, and technical sessions to stakeholders

Environment: Kotlin, Android SDK, Jetpack Compose, Material 3, MVVM & Clean Architecture, Kotlin Coroutines, Kotlin Flow (StateFlow/SharedFlow), Jetpack Libraries (ViewModel, Navigation, Room, DataStore), Dagger/Hilt Dependency Injection, BLE Connectivity, Multi-Module Architecture, Paparazzi Snapshot Testing, JUnit, Espresso, Mockito, Gradle (KTS), Git, CI/CD Pipelines, Firebase (Crashlytics, Analytics), Agile/Scrum.

Mobile Application Lead – Android/Flutter

WiSilica India Pvt Ltd

September 2014 – July 2022

- **Leadership and Architecture:** Leveraged over 8 years of industry experience to drive system architecture decisions and lead projects from conception through launch, setting the technical and organizational direction for mobile development teams. Demonstrated expertise in popular architectural design patterns such as MVVM, MVI, and CLEAN architecture.
- **Mobile App Development:** Prototyped, designed, developed, tested, and published Android apps for home automation, real-time tracking, and media solutions. Implemented Jetpack components and integrated Retrofit for network operations. Proficient in networking protocols including HTTP, Websockets, TCP, MQTT, with experience in debugging tools such as Charles Proxy, Chucker and Android Profiler.
- **API and SDK Management:** Managed Android OS API updates and various SDKs including Bluetooth, WiFi, NFC, Networking, Camera (Photo/Video), Audio, and File Management. Demonstrated expertise in connecting to third-party hardware, video streaming, and IoT devices over BLE and WiFi.
- **Quarantine Management Apps:** Delivered critical quarantine management apps within stringent timelines (under 45 days) to various ministries of health during the COVID pandemic, resulting in a 50% revenue increase.
- **SDK Development:** Created the WiSilica Mesh Android SDK with comprehensive documentation, empowering smart home and indoor tracking vendors to develop custom apps. This development cut costs by 50% and reduced development time by 30%, which helped secure notable clients such as Samsung, Philips, iGuzzini, and Jio.
- **Networking and Connectivity:** Resolved Bluetooth Low Energy (BLE) issues in IoT applications by developing a BLE scanner wrapper and utilizing BLE central mode communication. Integrated Google Play services, Firebase analytics, and Google Maps API to enhance user tracking by 30%.
- **Advanced Debugging and Analysis:** Developed an internal sniffer app to decode BLE messages from embedded devices, aiding in cross-functional team collaboration and BLE traffic analysis.
- **Optimized App Performance:** Built an offline-first app to reduce server traffic by 30% and developed an Android Studio plugin to switch between application variants, cutting build time by 40%.

- **Concurrent and Secure Coding:** Migrated multi-module projects from Java to Kotlin and MVVM architecture, reducing crashes to below 5% and addressing issues in application state management. Innovated an AES-128 encryption library to protect against security threats.

Environment: Kotlin, Java, Dart, Android SDK, Flutter, Jetpack Components (ViewModel, Navigation, Room), MVVM/MVI/Clean Architecture, Retrofit, OkHttp, WebSockets, MQTT, TCP/IP Networking, BLE (Bluetooth Low Energy), Wi-Fi & NFC Communication, IoT Device Integration, Firebase (Analytics, Crashlytics), Google Play Services, Google Maps API, Charles Proxy, Chucker, Android Profiler, AES-128 Encryption, Multi-Module Architecture, Gradle, Git, Android Studio, CI/CD, Agile/Scrum.

PROFESSIONAL QUALIFICATIONS

Qualifications:

Master of computer applications, University of Calicut-India [2009-2012]

Bachelor of Mathematics, University of Calicut- India [2006-2009]
